

WOW! A Golden Age DICK TRACY

BASED ON THE CHARACTERS AND STORIES
CREATED BY *Chester Gould*

POSABLE MODEL CHARACTER TOY
of YOUR VERY OWN!

DESIGNED BY THE PROFESSOR ON CHRIS WARE'S TEMPLATE

Wow! A paper "Dick Tracy" action figure all your own! What could be cooler? It's a new model based on artist Chris Ware's fun toy. I hope you'll find it "arresting!" It looks just like the hard-boiled Chicago gangbuster who walked the beat of Comics' Golden Age during the 1930s and 1940s. This model is for entertainment purposes only, and it must not be used commercially in any way!!! Now that the legal stuff is out of the way, get your tools ready, and let's get started!

STEP ONE: Study all the text instructions and building diagrams, and test fit parts before gluing together. Cut parts out along the heavy outlines, and use a scoring tool like an empty ballpoint pen, or a dull old butter knife. This will help create clean, sharp folds. Most of all, take your time and have fun!

STEP TWO: First, we will build the arms and legs of our paper crimefighter. Roll pieces 1-8 around a pencil or other cylindrical shaped object to get the proper curl. Glue them together to form tubes. If you plan to use the original spring joints, simply cut and fold the tabs into the center and glue the tube ends closed. If you are planning to string your model together with yarn, or make it posable with wire or pipe cleaners, you will need to punch holes in the flaps at the ends of each tube before gluing them closed. Then, either fold up all of the spring joints, 9-16, and attach them to the tubes following the instruction diagrams on page 2, or roll up the beads on page 3, and "string up" the pieces, with a bead at each joint.

STEP THREE: Next, fold up the torso assembly 17. Insert the coat liner 18, then

assemble the "sardine can" shaped hip piece 19. To string or wire the limbs, punch holes at the shoulder and hips, then run the wires or strings through before closing off the assembly. Reinforce the areas around the holes with thin cardboard. To make the head turn, don't close up the shoulder flap just yet. To add a bit of depth to the model, you can add the optional collar piece 17a.

STEP FOUR: Next, roll up Tracy's head 20, and glue down the top flap. If you want the head to turn, you can create a neck pin (see special instructions below & diagram on pg. 3). To build Tracy's signature overcoat, assemble parts 23-29 as shown in diagram, and slide over torso.

STEP FIVE: Now, assemble the feet 21-22, and glue them to the ends of the shins. Fold and glue the hands 30-31 to the ends of the arms. Wrap and glue watch radio 32 to the left wrist.

STEP SIX: If you are using the spring joints, attach them to the ends of the arm and leg assemblies and glue them to the torso at the shoulders and pelvis. If you are using string or wire, see the special instructions below and the diagram on pg. 3 before moving on.

STEP SEVEN: Glue the hat pieces 33-35 together. While it dries, fold and glue the gun together. Next, fold up and glue the badge and wallet together. Finally, place the fedora on the Tracy's head, and "hit the streets!"

SPECIAL INSTRUCTIONS: If you decide to use string or wire to hold your model together, I suggest you strengthen the model by rolling strips of paper around a toothpick and inserting them into the arm and leg tubes before gluing them shut. This will make them "solid" while still leaving a hole to pass the string or wire through. The head can be made solid in a similar fashion, and if the paper strips are wrapped around a pencil, a large enough hole will be left to allow an axle of paper to be rolled up, inserted into the head, passed through the shoulder plate, and fixed in place with a thin strip wrapped around the end (see pg.3).

A Very Special Thanks to Artist Chris Ware for his kind permission to use his template.

ARM PIECES.

STEP THREE.

HAT CROWN.

THIGH.

THIGH.

STEP TWO.

A base for your figure.

Roll these triangles up around a toothpick from thick end to point and glue down to create beads to use at joints.

These beads are designed to be used in place of the spring joints when assembling the figure using pipe cleaners, string or yarn. Punch holes in the ends of each limb cylinder and into the torso, then run the pipe cleaners, string or wire through, inserting a bead in between them at the shoulders, elbows, hips and knees. Twist or tie them off inside the torso and at the ends of the limbs, hiding the ends in the hands and feet. The pieces above are for the shoulders and elbows, the ones below are for the hips and knees.

DETAIL SHOWING HOW TO RUN WIRE OR YARN THRU THE ARM & LEG PIECES; ALSO, THE NECK PIN AND "NUT" TO HOLD IT IN PLACE.
